## REFERENCES

### Verisign Reston, VA

Brian James  
Engineering Manager

He has great technical skills. He is passionate about creating great user interfaces. He is also passionate about teams and good teamwork. Ben has improved the user interface of the MDNS product as a result of his involvement. He has also contributed to the overall improvement of our development process. He has helped identify pain points in our planning and requirements gathering and documentation. As a result, the team has seen some improvement in clarification of UI requirements. Ben has great skills, some of which I don't feel we have been able to fully take advantage of. I hope that can change in the future. We are lucky to have Ben as part of the development team.

### Compuware Detroit, MI

TJ Stevens  
Technical Project Manager

Ben is one of the most talented developers I have worked with; especially skilled in front-end web technologies. He has consistently demonstrated the ability to direct teams to produce incredibly complex results inside of ridiculous time frames. Last and probably most importantly, Ben was a key player in our client interactions helping to shape clear expectations and a sense of confidence in the times that our projects were under the most stress.
